animation

Last modified: Friday, August 22, 2003

A simulation of movement created by displaying a series of pictures, or frames. Cartoons on television is one example of animation. Animation on computers is one of the chief ingredients of multimedia presentations. There are many software applications that enable you to create animations that you can display on a computer monitor.

Note the difference between animation and video. Whereas video takes continuous motion and breaks it up into discrete frames, animation starts with independent pictures and puts them together to form the illusion of continuous motion.

video

Last modified: Thursday, January 22, 2004

(adj.) (1) Refers to recording, manipulating, and displaying moving images, especially in a format that can be presented on a television.

(2) Refers to displaying images and text on a computer monitor. The video adapter, for example, is responsible for sending signals to the display device.

(n.) A recording produced with a video recorder (camcorder) or some other device that captures full motion.

animation

Moving diagrams or cartoons that are made up of a sequence of images displayed one after the other. Animations are created for entertainment, ad banners as well as instructional sequences. The two most popular animation formats on the Web are animated GIFs and Flash. See [animated GIF](#) and [Flash](#).

TechEncyclopedia

More than 20,000 IT terms

Results found for: video

video

An audio/visual recording and playback technology used in TV as well as in the home and office. In the U.S., NTSC is the standard for analog recording, and DTV is the standard for digital. The term also refers to computer screens and terminals, but they support VGA display standards such as SVGA and XVGA, not NTSC or DTV. See [NTSC](#) and [DTV](#).
